

How To:

See Notes and Highlights From the Mobile App

Your private posts only show on the app to you! You can view all of your posts together on the app home feed — your private, public, and closed group posts — by clicking on your own icon in the home feed. Your icon will always be the first icon to the right of “All” at the top of screen in your home feed.

This is a great tool for you as well as your followers. You can not only just scroll through your own posts, but ALSO use Highlights for your own benefit with private notes. Highlight the promises God has given you, things He is reminding you of, giving you faith and substance to hope for and believe for... scroll through and renew your mind with His promises... do it every day using your highlights.

Highlights are like notecards — swipe through them on the mobile app — view them as you’re spending time with God and reflecting on who He is becoming for you. Highlight God’s promises to you and meditate on them as you’re standing in line at the grocery store checkout.

Your private notes and highlights can even be a way to memorize scripture. Paste the scripture verse in your private note and highlight short phrases that you can swipe through daily in the mobile app. Create as many highlights as you want to for each note.

Notes and highlights to CLOSED groups will show in the app feed and be seen by anyone who has followed you, joined your CLOSED GROUP, and been approved to your CLOSED group.

Notes and highlights to PUBLIC posts will show in the app feed and be seen by anyone who has followed you and added your PUBLIC group.

Remember, the full note will show under the highlight block, so use highlights just to give images, keys and short phrases that will engage your followers to read your post.
